DETAILED ACTION

It is noted that numerous claims appear in improper form. For example, claim 3, 9, 10, 12 and 13 are in improper multiple dependent format. Multiple dependent claims must depend on other claims in the alternative only. See MPEP § 608.01(n). Additionally, claims 7, 9, 10, 11, 12 and 13, while technically depending from claim 1, among other claims, which would make them part of the rotary brush assembly of claim 1, appear to be directed to different inventions and are improper. For example, claim 7 is directed to "The mounting frame of claim 1". A dependent claim must include all the limitations of the claim from which it depends, not just a part of it. So the claim should read ---The rotary brush assembly of claim 1 wherein the mounting frame further comprises...---. These claims have been treated as though they are part of the rotary brush assembly for restriction purposes. However, if applicant rewrites these claims such that they are not dependent and relate to distinct inventions, further restriction may be required. For example, if claim 7 is rewritten to be directed to ---A mounting frame comprising:...---, such may be restrictable from the rotary brush assembly.

Additionally, while claim 8 is set forth as depending on claim 5, it appears that it should depend from claim 6 as it sets forth a mechanism and discusses the controlling surface which has been set forth in claim 6. Thus claim 8 has been further treated as though it depends from claim 6. Clarification is requested.

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-5, 7, 9, 10, 11, 12 and 13, drawn to a rotary brush assembly, classified in class 015, subclass 082.
- II. Claims 6 and 8, drawn to a mechanism for attaching, classified in class 015, subclass 082.

The inventions are distinct, each from the other because of the following reasons:

Inventions Group I and Group II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable. In the instant case, subcombination of mechanism for attaching has separate utility such as use with any earth moving or disturbing tool. See MPEP § 806.05(d).

The examiner has required restriction between subcombinations usable together. Where applicant elects a subcombination and claims thereto are subsequently found allowable, any claim(s) depending from or otherwise requiring all the limitations of the allowable subcombination will be examined for patentability in accordance with 37 CFR 1.104. See MPEP § 821.04(a). Applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.

Art Unit: 1744

Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Gary K. Graham whose telephone number is 571-272-1274. The examiner can normally be reached on Tuesday to Friday (6:30-4:00).
